

One Platform for All Databases

Accelerate Data Services using ONE platform with ONE-Click deployment and operation for Any Database, without lock-in

Enterprises run on data. But the databases that we use in the enterprise have changed. Gone are the days of putting everything in one traditional database, which is monolithic in architecture. Modern microservices aren't supported by a single database anymore. Following are the key pain points associated with operating databases in modern architectures:

Heterogeneous databases

The developers leveraging your platform are running databases, analytics, search, streaming, and AI/ML workloads. Each of these solutions has its own patterns for deployments, data protection, security and more.

Multiple operating tools and vendors

Platform teams end up deploying unique operators and APIs for each database and also co-ordinating with multiple vendors individually to get support for these databases.

Skillset gaps and scaling challenges

Finding and retaining talent with unique skills for each database is tough and scaling on a monolithic architecture can be challenging since administration and lifecycle management are very time consuming.

Portworx Data Services is the Database-Platform-as-a-Service to accelerate Data Services on ONE platform with ONE-Click deployment and operations for Any Database, without lock-in

Any App

1-click Database Deployments

Built-in HA, data protection, security

Scheduled Backup Policies

REST API Driven or use the UI

Curated Templates for Database sizing

Application Aware Backup

24/7 Enterprise Support for Any database

Cloud Native DBPaaS

Data services supported today include:

Kafka | Cassandra | MongoDB | Postgres | Elastic | Couchbase
Consul | Redis | RabbitMQ | Zookeeper | More Coming...

Business Outcomes of Portworx Data Services

- Reduce time-to-market for new apps by up to **50%**
- Save up to **75%** of costs associated with cloud databases
- **3X** improvement in database admin productivity

Run All Databases on One Platform

Run ONE Platform

Deploy production grade data services with a single click on any cloud, at a low cost without any lock-in

Operate ALL Databases

Perform Day 2 Operations with a single pane of glass, versus hiring specialists skill sets for each data service

Manage ONE Solution

Adopt a consistent 24x7 Enterprise grade support related to multiple data services from a single vendor

Portworx Data Services Cloud Native DBPaaS

- One click database deployments
- Broad catalog of data services
- API driven or use the UI
- DBPaaS experience on any infrastructure
